Väderstad ISOBUS implement with TopCon X25

**NOTE!** This document is a quick guide only and requires that the Väderstad implement is connected correctly and that the user possesses some basic knowledge of how this display and its functions is working. For further information regarding display functions we refer to the user manual provided by the manufacturer.

**TIP!** Some chapters in this guide refers to the displays user manual. Before you use this guide in field, please read through this guide completely and make sure you have access to the required documentation.
1. Introduction
When installing and running a Väderstad ISOBUS implement with a ISOBUS terminal, it is important to follow and complete the steps in this guide.
This document is a quick guide only and requires that the Väderstad implement is connected correctly to the display and that the user possesses some basic knowledge of how this display and it’s functions is working. For further information regarding display functions we refer to the operators manual provided by the manufacturer.

Before you proceed to the next chapter, please ensure that both the terminal software and the Väderstad software matches the one specified on the Väderstad homepage.
http://www.vaderstad.com/products/vaderstad-e-services/isobus

2. Check the terminal software version
It’s important that the display software matches the one tested from Väderstad. If the display software separates from the one tested, some functionality may not work as expected.

When the display is running and the run-screen is shown. Press the “TopCon”-logo in the upper left corner, check the row saying “Software Version: “

![Screen 1. System information](image)

If the software version is incorrect, please contact your local TopCon dealer. If the version matches please continue to the next step.
3. Check Activations

In order for “Section Control” and/or “Variable Rate” to work the display may be unlocked with a specific license. If the display is locked, please advise your local display reseller in order to purchase this activation.

When the display is running and the run-screen is shown. Press the button in the lower left corner. In the menu shown press System -> Features -> Implement. Make sure “Auto Section Control” and/or “Variable Rate Control” it’s enabled.

Screen 2. Display activations

4. Activating Task Controller in Väderstad User Interface (UI)

Open the “Väderstad UI”. In the Väderstad UI, press “Settings”, on the next screen press “General Settings”. Toggle the Task Control button to “ON” (screen 3).

Screen 3. Task Controller ON
From the general settings, press the “TC-submenu” button. In this menu you’re telling the display what product to be controlled and also what functions to be used by turning “Section Control” and/or “Variable Rate” to ON or OFF. In this menu you’re also able to set the implement offsets and ON/OFF timers for each product. For further information regarding these settings please read the “Task Control”-chapter in the Väderstad E-Control user manual.

When all settings is set and the TC-submenu is exited the Task Controller object pool is updated and sent to the display. After 20 seconds the implement profile is updated with the latest settings.

**WARNING:** No changes in the TC-submenu is to be done when a field is open or a job is created. If changes is done while a field is open or a task is started, the gateway and the display may end up in bad state causing rate/coverage feedback to be lost or implement changes not to be updated.

5. Creating a implement on the display

From the “Run-screen” press the button in the lower left corner. In the settings menu press Implement -> New. Chose the correct implement type to start the wizard. A message shows stating that the console will restart once the implement has been created. Press “Accept”. The important steps is marked with (!) and described below in this guide. These settings must be correctly configured in order for the configuration to work.

**Step 1: Implement Control**
(!) Chose the desired functions you want to use, this should match the functions enabled in chapter 4 of this guide.

**Step 2: ECU Type**
(!) The ECU type should always be ISOBUS. Do NOT chose “Väderstad Seeder” from the list.

**Step 3: Implement Function**
(!) Chose “Planter”.

**Step 4: Implement Control**
(!) Chose the ECU shown in the list, should match the implement connected (RD/RDA/TP).
For further information please see the “Setting up a new implement (77)”-chapter in the operators manual.

6. Create job and/or enter necessary documentation settings
When you have created the implement please return to the “run screen” to open a field and start a new job. For further information, please see the "Field Menu (121)"-chapter and the “Job Menu (131)”-chapter in the operators manual.

8 Use of “Section Control”

8.1 Create field and field boundaries
If section control is to be used when exiting field and/or headland boundaries these must be defined. For further information, please see the "Setting a new boundary (123)"-chapter in the operators manual.

8.2 Section Control Settings
If section control is to be used when exiting field and/or headland some settings must be set. For further information, please see the "Setting up section control (82)"-chapter in the operators manual.

9 Use of “Variable Rate”

9.1 Import/Load shapefile
If “Rate Control” is to be used, a prescription file must be used. For further information, please see the "Using variable rate control (140)"-chapter in the operators manual.
